All vehicles built from Nov. 2014 do have an integrated tire pressure control system. In general there are two systems:
 1. Indirect tire pressure control system: No sensors are needed in the rims as the measurement is carried out over the tire rotation.
 2. Direct tire pressure control system: The tire pressure control sensors are installed directly in each wheel.
 When ordering, please indicate whether the vehicle has a direct or indirect measuring system installed. With a direct measuring system additional costs will arise due to the integration of the sensors.

* ABT Spacer Discs, wheel center rings or wheel bolts are not included in the price.
