

## ABT Sportsline 2020 – Press Release CW 09

### **20% price reduction for Spring 2020 Exciting new models at ABT Power Days**

Whether brand-new or already used: At the **ABT Power Days**, a wide range of models from the VW and Audi Group can receive a sporty extra kick with a 20% price reduction. The reduction applies to all **ABT Power Performance Upgrades\*** installed between 19 and 31 March 2020. This offer is valid at the headquarters in Kempten and across Germany at over 100 participating **ABT dealers**. From experience, due to the increase in demand during the promotion period, we recommend that you book your appointment in good time. Customers from Austria, the Netherlands, Finland, Spain, Poland, Russia, Ukraine and South Africa are also eligible to take part in their respective countries. The **ABT Power Days** are also taking place in Switzerland – albeit slightly later, from 16 to 28 April. For further information, go to: [www.abt-sportsline.com/abt-power-days](http://www.abt-sportsline.com/abt-power-days).

The promotion includes performance upgrades for a wide range of models and specifications. Check the [Online-Configurator](#) for up-to-date availability. We would like to highlight a few examples from the current range: Most worthy of mention is the **ABT Power Performance Upgrade** for the Audi RS 4. A hefty 510 hp (375 kW) instead of 450 hp (331 kW) means an increase of 60 hp (44 kW). The Skoda Kodiaq RS with the 240-hp (176 kW) 2,0 TDI engine has a new actual value of 270 hp (199 kW), so it now boasts an extra 30 hp (22 kW). With 300 hp (221 kW), the standard Cupra Ateca already delivers great performance. **ABT Sportsline** unleashes an extra 50 hp (36 kW) and generates a respectable 350 hp (257 kW). The Allgäu company provides several performance upgrades for the brand-new T6.1. For example, the 150-hp (110 kW) TDI receives an increase of 30 hp (22 kW), resulting in a total of 180 hp (132 kW). Likewise, the VW Tiguan also harbours significant potential. A good example is the 230-hp (169 kW) petrol-driven model. It now delivers 276 hp (203 kW), which equates to a boost of 46 hp (34 kW).

All **ABT Power Performance Upgrades** are based on the high-tech control unit **ABT Engine Control (AEC)**. Various engine protection measures and a wide range of sensor values ensure optimum reliability and support problem-free performance enhancement. In addition, all performance upgrades are tailored to the respective vehicle model through comprehensive testing on our in-house dynamometer and on public roads.

\*The engine performance data is in accordance with the stipulations of EWG/80/1269. The process and dynamometer manufacturer have been certified and authorised by the vehicle manufacturer. For further details, visit <https://www.abt-sportsline.com/performance-measurement>.
